## Dissertation Title

### Abstract

While the search for ever heavier Beyond the Standard Model (BSM) particles is a popular exercise at the energy frontier, the search for XXX has been less explored. This thesis presents a search for YYY in a novel  $140 \text{ fb}^{-1}$  dataset collected by the ATLAS experiment during Run 2 at the Large Hadron Collider (LHC) at  $\sqrt{s} = 13 \text{ TeV}$ . The dataset is unique in that it is collected at the
