

# tableau-icons.typ

Tabler Icons Version 3.36.1

Package 0.336.0

## ⚠ This package has no association with Tabler

This package contains the symbols from Tabler Icons v3.36.1, but has no association with the Tabler.io team themselves.

Despite the bad naming (the name is translated *Table icons*, which is only one character away from *Tabler icons*), this package implements a simple function to allow the use of Tabler.io Icons (<https://tabler.io/icons>) in your documents.

## 👉 Usage

Include the package as any other package:

```
#import "@preview/tableau-icons:0.336.0": *
```

⚠ and don't forget to install the Tabler.io Icons font ⚠

Since some time ago, the Tabler.io team has decided to exclude the webfonts from the free tier and moved them into the \$5 tier. While it is sad, I do understand, that they want to earn a bit more cash from it.

## 📘 Documentation

### tableau-icons

#### </> ti-icon

To draw the icons, this function can be used. `ti-icon` draws the icon as a text, meaning every text-related rule also affects this library's output!

#### Parameters

```
ti-icon(  
  name: string,  
  fill: color,  
  size: length,  
  baseline: length,  
  ...args: arguments  
) → content
```

## **name** string

The name of the icon. Search the icon's label on <https://tabler.io/icons> and copy it. Attach “-filled” to get the filled version of the icon if available.

```
#ti-icon("flag-3")
#ti-icon("flag-3-filled")
#ti-icon("lock-check")
#ti-icon("cat")
#ti-icon("photo-spark")
#ti-icon("world-check")
```

## **fill** color

Color of the icon.

```
#ti-icon("bowling")
#ti-icon("bowling", fill: red)
#ti-icon("bowling", fill: blue)
#ti-icon("bowling", fill: olive)
#ti-icon("bowling", fill: purple)
```

If no colour is given, the colour is defaulted to the text's currently assigned colour (which defaults to black).

```
#set text(blue)
#ti-icon("cheese")
#ti-icon("pepper")
#set text(red)
#ti-icon("flag-check")
#ti-icon("flag")
```

Default: `auto`

## **size** length

Size of the icon (equivalent to font size)

```
#ti-icon("book-2", size: 0.5em)
#ti-icon("carrot")
#ti-icon("cat", size: 1.5em)
```

Default: `1em`

## **baseline** length

The baseline parameter offsets the icon from its paragraph placement. It's the text's element baseline

```
#ti-icon("walk")
#ti-icon("cat",      baseline: -0.3em)
#ti-icon("dog",      baseline:  0.3em)
#ti-icon("moon",     baseline: -2em)
```

Default: `0pt`

## `</> ti-icons-version`

When citing this package you can use this constant to display the current tabler icon set version (which is 3.36.1).

`#ti-icons-version`

3.36.1

## `</> ti-pkg-version`

When citing this package you can use this constant to display the current package version (which is 0.336.0).

`#ti-pkg-version`

0.336.0

## Known Issues

- Some symbols are missing, but I think this is an operating system issue!

## Changelog

### v0.336.0

- updated Tabler Icons version v3.36.1

### v0.334.1

- Renamed draw-icon to ti-icon
- Reimplemented how the icon gets inserted into the document (instead of a box, it is now a simple text).

### v0.334.0

- updated Tabler Icons version v3.34.0
- changed URL from Github to the new Codeberg repository
- **IMPORTANT NOTICE:** Tabler Icons has removed webfonts from their free tier. I might no update this package anymore or only when a lot of icons have been added.

### v0.331.0

- updated Tabler Icons version v3.31.0
- added ti-pkg-version, ti-icons-version to the library import file (lib.typ), so the docs can actually be compiled

### v0.330.0

- updated Tabler Icons version v3.30.0
- changed how this package is versioned (`package major.tabler major+minor.package patch`)
- added tidy-package to documentation

### v0.1.0

- initial version
- added Tabler Icons version v3.29.0
- added `#draw-icon()`

---
