

ornamentalist

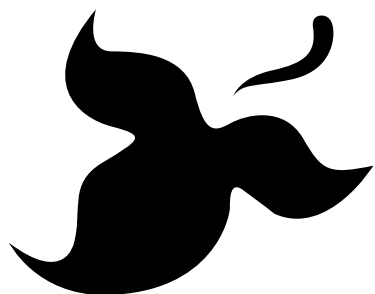

Introduction

The `ornamentalist` package is a reimplementation of the LaTeX package `pgfornament` by Alain Matthes, which allows to render vector images of various ornaments.

Its main entry point is the `ornament` function, which renders a specific ornament based on its number. The package currently features 3 collections:

- `vectorian`, containing a collection of Victorian symbols, originally designed by Vincent Le Moign at vectorian.net.
- `pgfhan`, containing a collection of Chinese traditional motifs compiled by LianTze Lim based on designs by Chenna Zhang.
- `am`, containing two example symbols

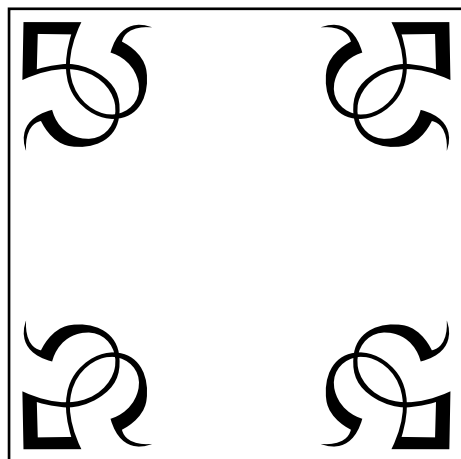

An ornament can be rendered with `#ornament(<number id>,collection: <collection name>)`, e.g. `#ornament(1,collection: "vectorian")` gives:

It wraps the more general function `symbol_from_pgf_file`, which renders an arbitrary symbol defined in a `.pgf` file.

The collection is "vectorian" by default, and could thus have been omitted in the example above. The rendered object is placed inline; one will often want to use `place` to render it in the desired position:

```
#rect(width:6cm,height:6cm)[
  #place(top+left,ornament(31))
  #place(top+right,ornament(32))
  #place(bottom+left,ornament(31,symmetry: "h"))
  #place(bottom+right,ornament(32,symmetry: "h"))
]
```

Options include:

- `fill`: defines a fill color for the ornament (ex: `#ornament(1, fill: red)`)
- `symmetry`: applies a symmetry to the ornament. Can be h (horizontal), v (vertical) or c (center)

Usage

👉 Ornaments are placed inline by default.

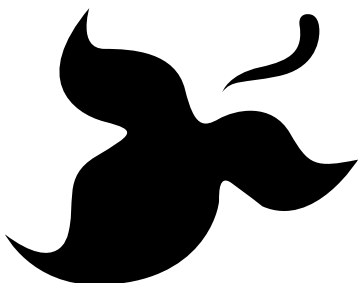

👉 In order to handle their size, you may use the `height` and `width` parameters. If only one is provided, the ornament will be resized to the desired width/height while keeping the same aspect ratio. If both are provided, the symbol will be rescaled accordingly ignoring the original aspect ratio.

👉 The `place` function from the standard library can be very useful for putting the ornaments in the desired position. You may also want to consider using the `set` function `#set page(background: ...)` when making a page template.
