

Your Thesis Title

by

First Middle Last

A thesis submitted in partial fulfillment of the requirements for the degree of

Master of Science

Department of Mechanical Engineering

University of Alberta

© First Middle Last, 2026

Abstract

Replace this paragraph with your thesis abstract. State the research problem, approach, principal findings, and contribution. The abstract must be no longer than 700 words and must not contain citations, tables, figures, or unexplained abbreviations. Its double spacing is supplied by the template.

Preface

Replace this paragraph with a preface appropriate to your own work. Describe your contributions and any collaboration, previously published material, ethics approvals, artificial intelligence use, and funding as applicable under the current GPS requirements. Have your supervisor review the final statement. This sample does not make any declarations about your research.

Dedication

Replace this text with your dedication, or set `dedication: none`.

Acknowledgements

Replace this text with your acknowledgements, or set acknowledgements: none.

Glossary

Model A representation used to describe a relationship or process.

Chapter 1 Introduction

Replace this chapter with the context, motivation, research question, and contributions of your thesis. Keep the organization appropriate to your discipline and discuss it with your supervisor.

1.1 Background

Use citations to connect your work to the literature. This starter includes an article citation [1] and an institutional report citation [2]. Replace these examples with sources relevant to your thesis.¹

1.2 Thesis organization

Chapter 2 demonstrates equations, tables, figures, and code. Supporting material appears in Appendix A. These references update when headings move or their numbers change.

¹This is a sample explanatory footnote. Remove it or replace it with your own text.

Chapter 2 Methods and examples

Replace this chapter with the methods and evidence for your research. The values below are illustrative examples, not research results.

2.1 Equations and tables

2.1.1 Illustrative relationship

A simple relationship is given in Equation (2.1):

$$y = 2x + 1. \quad (2.1)$$

Table 2.1 shows three values generated from this relationship.

Table 2.1: Illustrative values for the example relationship.

x	y
0	1
1	3
2	5

2.2 Figures and code

Figure 2.1 shows an example workflow drawn with native Typst shapes.

Figure 2.1: An illustrative three-stage workflow.

The following code calculates the example values:

```
for x in range(3):  
    print(x, 2 * x + 1)
```

Chapter 3 Conclusion

Replace this chapter with your principal findings, contributions, limitations, and directions for future work. Relate them to the question introduced in Chapter 1. Refer back to the evidence, such as Table 2.1 and Equation (2.1), without repeating the full methods chapter.

Appendix A Supporting material

A.1 Additional relationship

Replace this appendix with material that supports the main text. Appendix headings and numbered objects use letter prefixes, as in Equation (A.1).

$$x = \frac{y - 1}{2}. \quad (\text{A.1})$$

Replace with a photograph.

Plate A.1: Placeholder for a photographic plate.
