List of Icons	6

Minimal Example

example.typ

```
#import "@preview/ficons:0.1.0": icons, inline-icons, make-icons
```

Icon images are accessed with the exposed ``icons`` variable:

```
#stack(dir: ltr, spacing: 7pt, icons.phone, icons.user, icons.github,  
icons.map-pin)
```

We have inline icons like this moon `#inline-icons.moon` which can be accessed with the ``inline-icons`` variable:

Icons can be customized using the ``make-icons`` and ``make-inline-icons`` functions.

```
#let slim-red-icons = make-icons(stroke: red, stroke-width: 1)
```

```
#stack(dir: ltr, spacing: 7pt, slim-red-icons.phone, slim-red-icons.user,  
slim-red-icons.github, slim-red-icons.map-pin)
```

example.pdf

Icon images are accessed with the exposed icons variable:

We have inline icons like this moon ☾ which can be accessed with the inline-icons variable:

Icons can be customized using the make-icons and make-inline-icons functions.

Local Installation

This package includes an install script for Linux. Simply run it to install this package to the local namespace.

```
python ./install.py
```

Typst API (with examples)

make-icons

Create an icon set with additional options

Example

Using the `make-icons` function, we can create a custom icon set with additional tweaks.

```
#let tweaked-icons = make-icons(  
  // Specify new icon color  
  stroke: orange.darken(20%),  
  // Make the stroke thinner  
  stroke-width: 1,  
)  
  
#tweaked-icons.sun  
#tweaked-icons.moon
```

Output

Using the `make-icons` function, we can create a custom icon set with additional tweaks.

Parameters

```
make-icons(  
  stroke: str color,  
  stroke-width: str int,  
  fill: str color none  
) -> dictionary[str, image]
```

stroke str or color

The color of the icons. This corresponds to the `stroke` field within the SVG source code

Default: "currentColor"

stroke-width str or int

The `stroke-width` field within the SVG source code

Default: 2

fill str or color or none

The fill between strokes in the icon

Default: none

make-inline-icons

Create an *inline* icon set with additional options

Example

Using the `make-inline-icons` function, is the same as `make-icons`, but the resulting icons can be used inside text.

```
#let tweaked-icons = make-inline-icons(  
  stroke: blue.darken(20%), // Specify new icon color  
  stroke-width: 3,          // Make the stroke thicker!  
)
```

Here we have the `#tweaked-icons.sun` (sun) and `#tweaked-icons.moon` (moon)!

Output

Using the `make-inline-icons` function, is the same as `make-icons`, but the resulting icons can be used inside text.

Here we have the ☀ (sun) and 🌙 (moon)!

Parameters

```
make-inline-icons(  
  stroke: str color,  
  stroke-width: str int,  
  fill: str color none,  
  height: relative,  
  baseline: relative  
) -> dictionary[str, content]
```

stroke str or color

The color of the icons. This corresponds to the `stroke` field within the SVG source code

Default: "currentColor"

stroke-width str or int

The `stroke-width` field within the SVG source code

Default: 2

fill str or color or none

The fill between strokes in the icon

Default: none

height relative

Height of the icon

Default: `1em`

baseline `relative`

Baseline offset of the icon

Default: `0.2em`

icons-version `str`

Version of the icons (not the package)

icons-repository `str`

URL of the feather icons repository where the SVG source code is contained

icons `dictionary[str, image]`

Icon Images

Example

```
#stack(dir: ltr, icons.package, icons.code, icons.coffee)
```

Output

inline-icons `dictionary[str, content]`

Icons for use inside text

Example

```
Inline icons can be placed #inline-icons.map-pin directly within text  
#inline-icons.edit-2.
```

Output

Inline icons can be placed ☺ directly within text ✍.

svg-icons dictionary[str, str]

SVG source for icons

Example

```
#raw(svg-icons.clock, lang: "svg")
```

They can be turned into icons like this:

```
#image(bytes(svg-icons.clock))
```

Output

```
<svg xmlns="http://www.w3.org/2000/svg" width="24" height="24" viewBox="0 0 24 24" fill="none" stroke="currentColor" stroke-width="2" stroke-linecap="round" stroke-linejoin="round"><circle cx="12" cy="12" r="10"/><polyline points="12 6 12 12 16 14"/></svg>
```

They can be turned into icons like this:
